

High resolution imaging at ultra-low frequencies with LOFAR

Christian Groeneveld

Supervisors: Reinout van Weeren

Frits Sweijen

- High resolution (~ 1 arcsec)
- Ultra-low frequencies (~ 50 MHz)
- LOFAR

Source: NASA

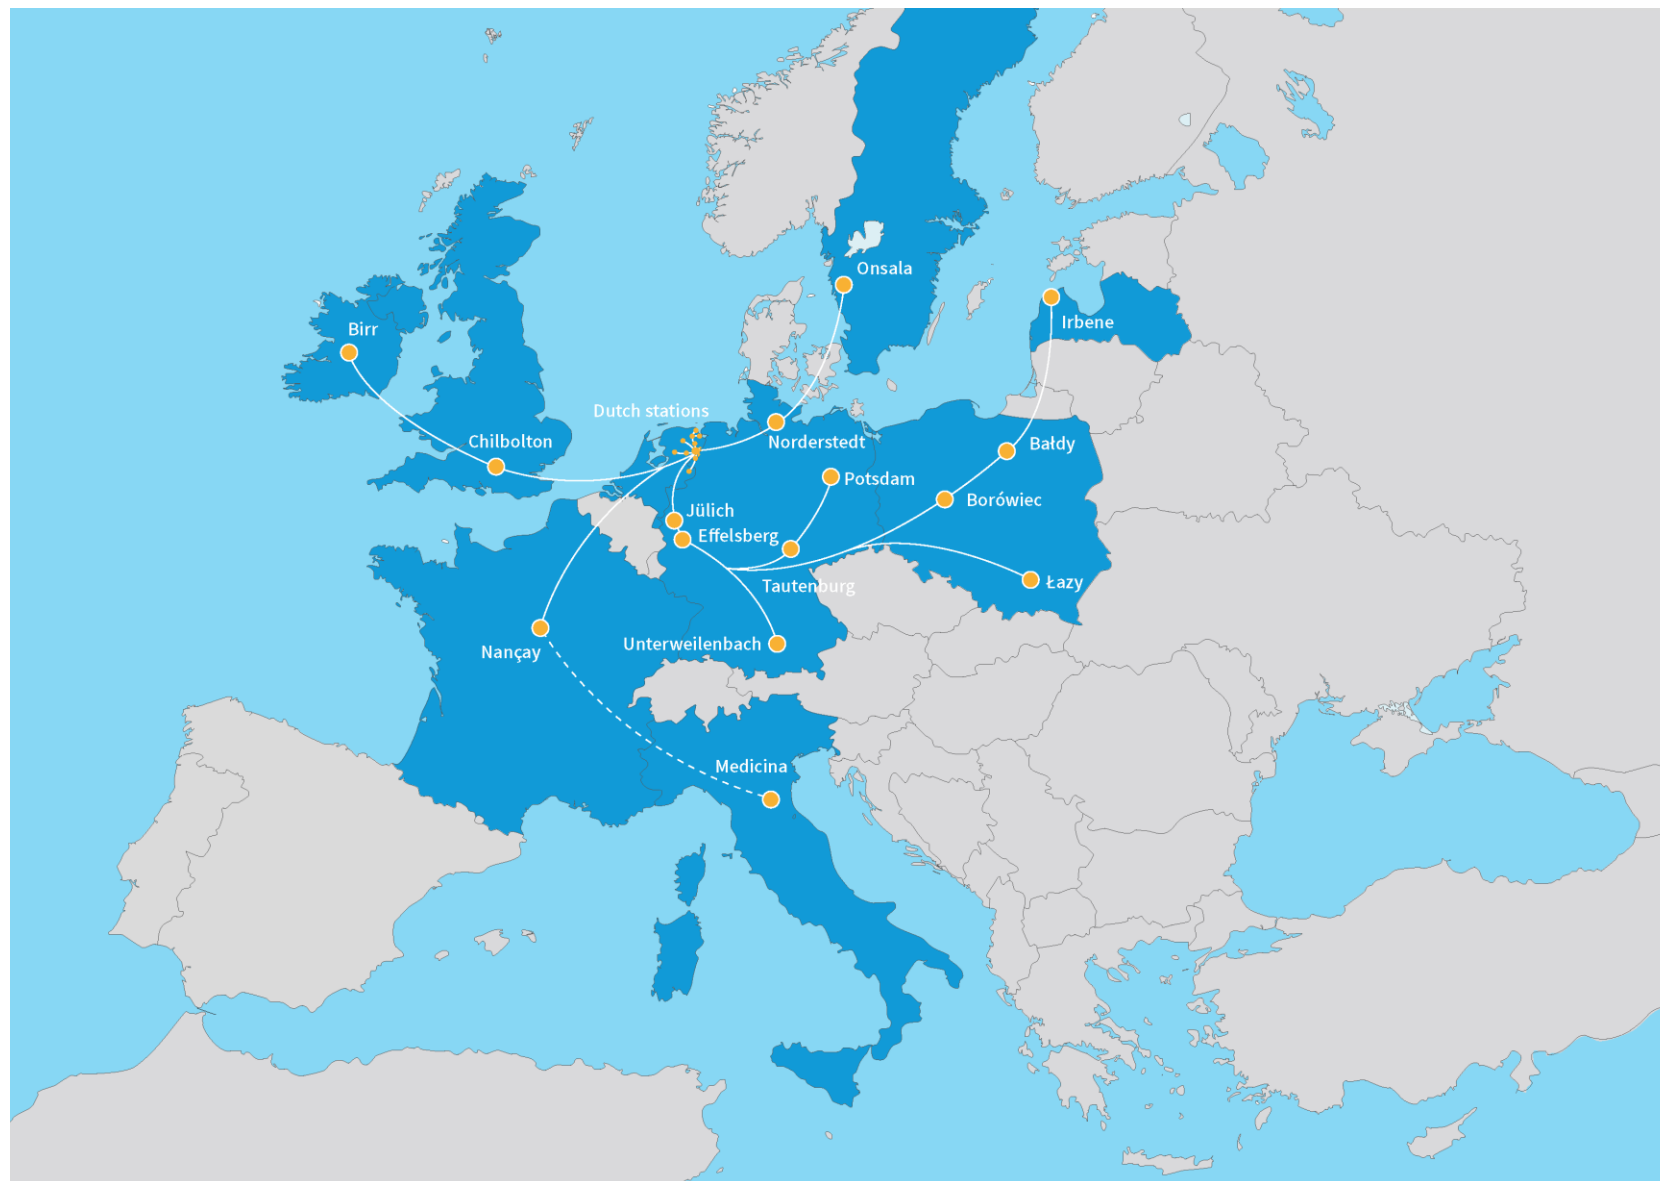

Source: astron.nl

LOFAR

- Largest baseline ~1900 km

L/D:

- @ 50 MHz: ~0.7''
- @ 30 MHz: ~1''

Source: astron.nl

Challenges

- Calibration!
- Ionosphere
- Phase shift:
 - Time dependent
 - Frequency dependent
 - Direction dependent
 - Antenna dependent

But why?

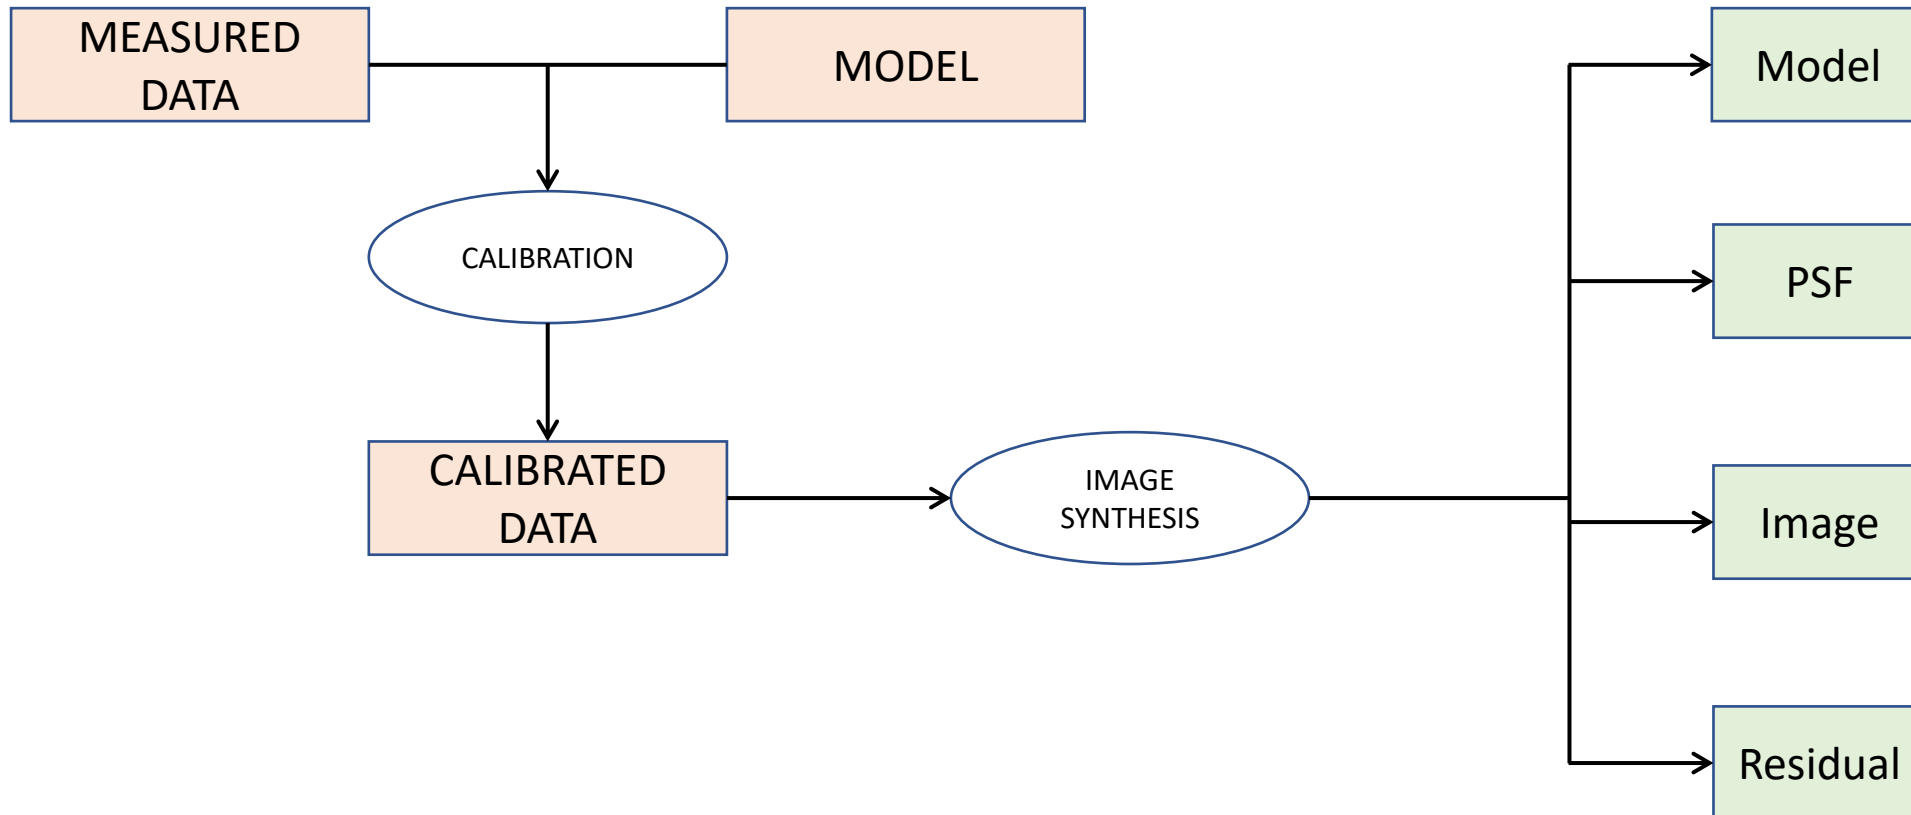

- First look at this frequency window
- Radio jets: AGN activity history
- Proof of concept for LBA VLBI with LOFAR

How

- Self-calibration
 - Gains per antenna
 - (model) visibilities per antenna pair
- 3 compact, bright sources
 - 3C 273, 3C 295, 3C 196
 - ~ 100 Jy

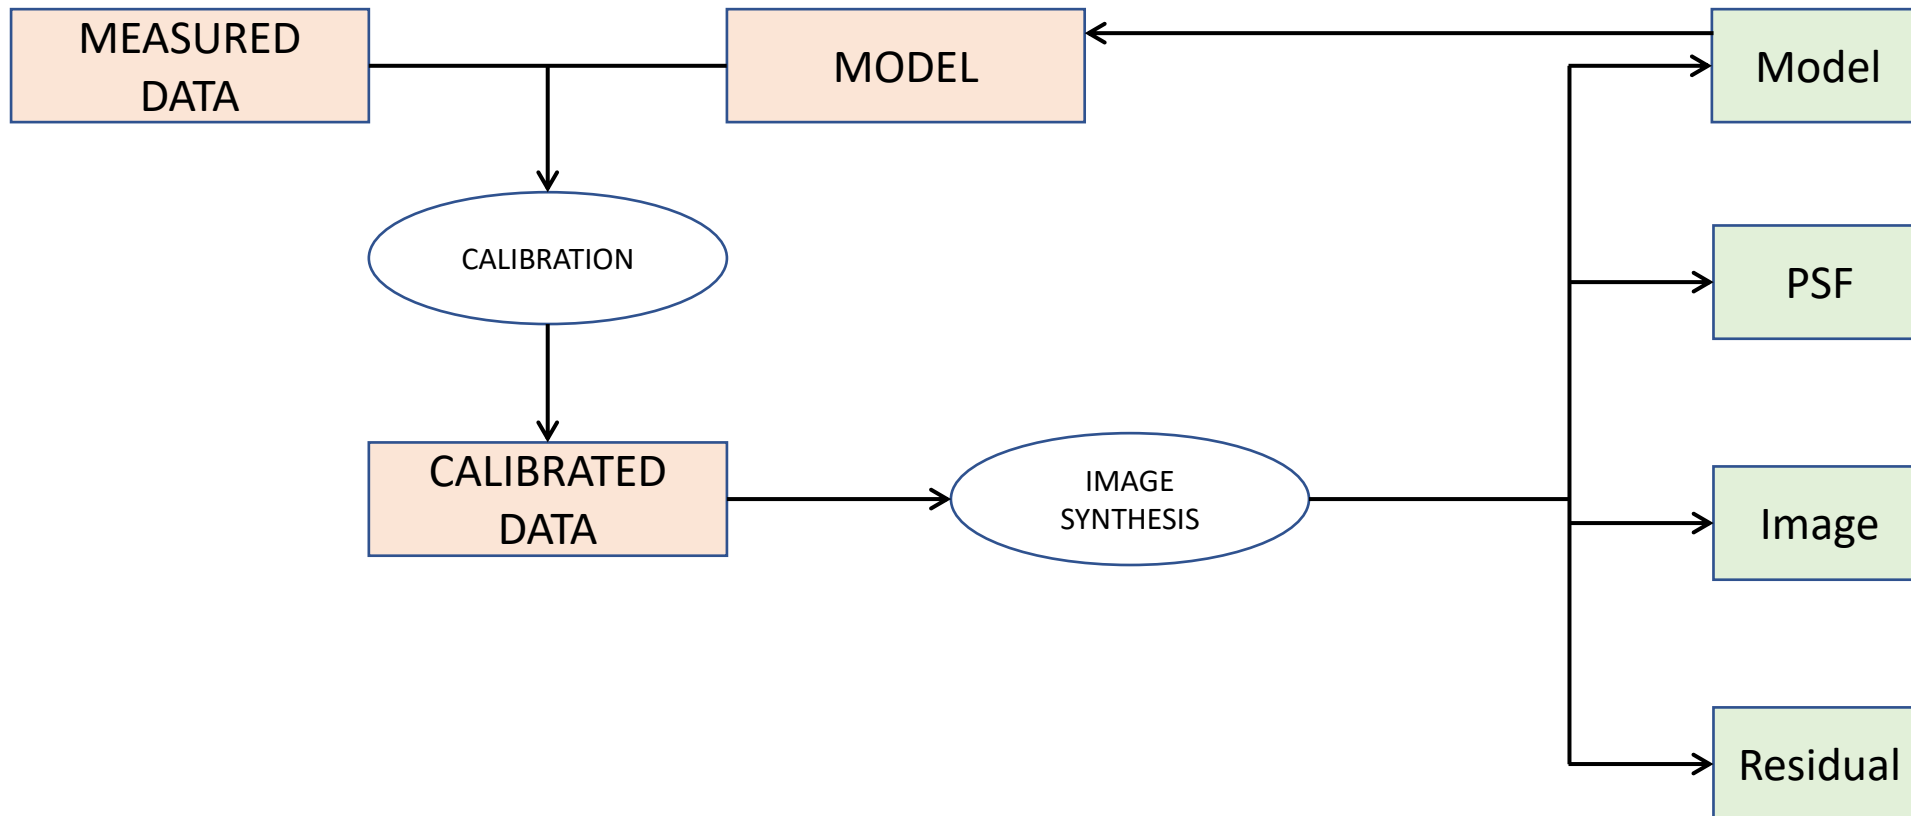

Self-calibration with LOFAR

$$\sum_{time} \sum_{m < n} w_{mn} |V_{mn}^{actual} - g_m g_n^* V_{mn}^{model}| \quad TMS (11.8)$$

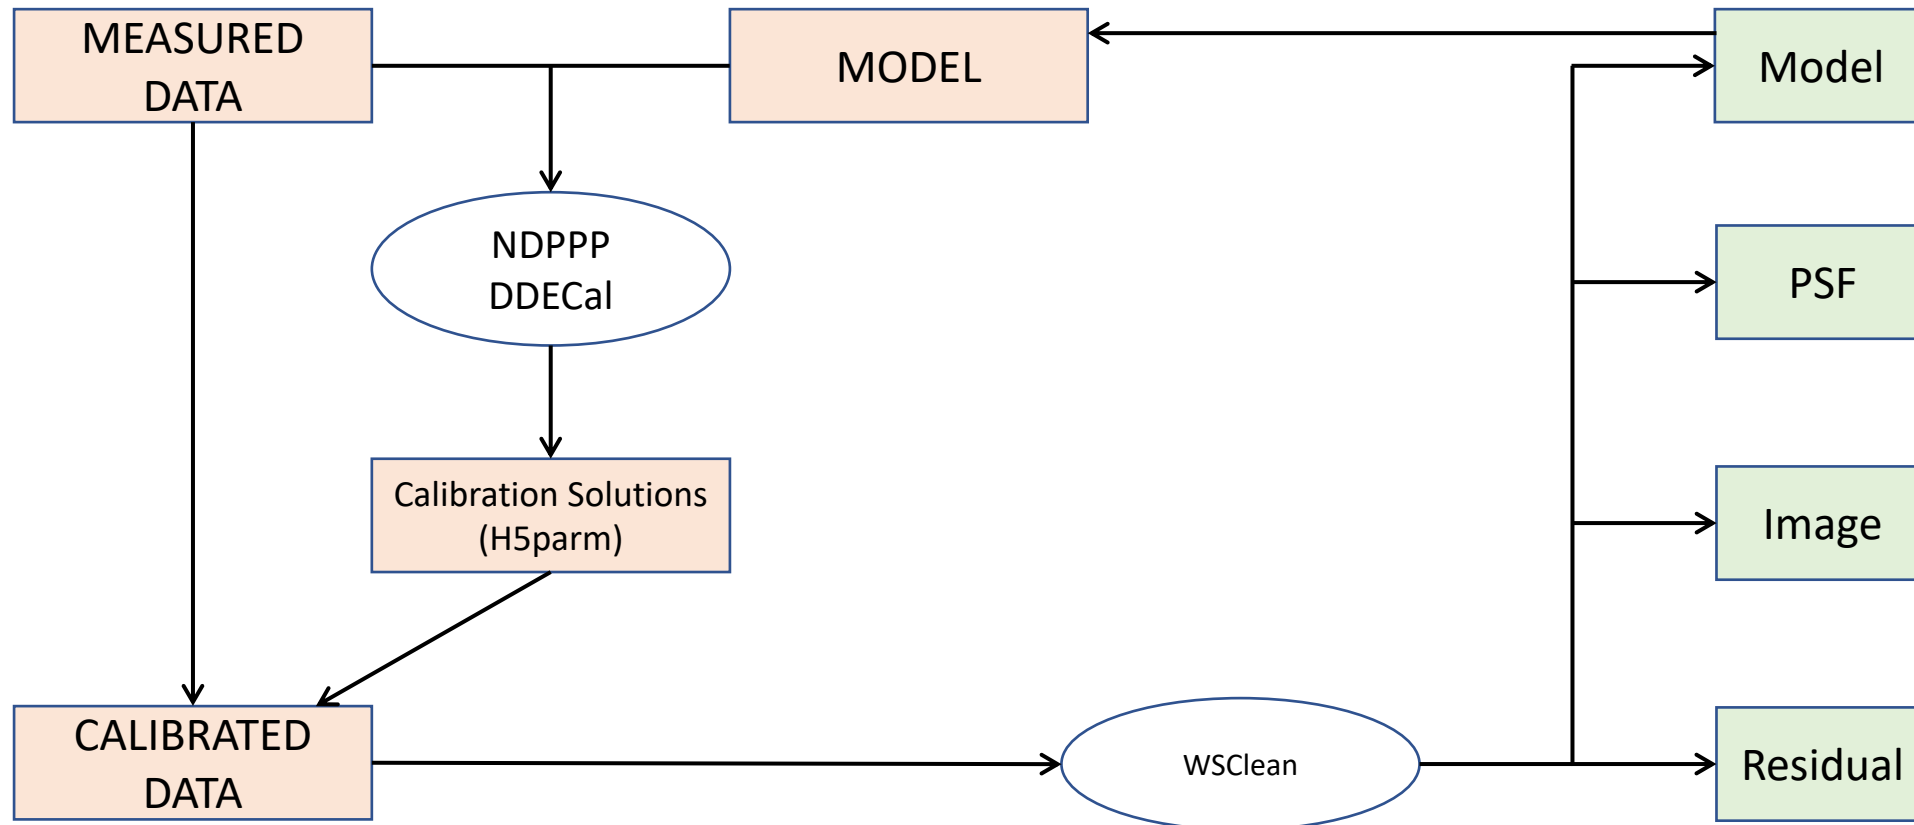

Self-calibration with LOFAR

$$\sum_{time} \sum_{m < n} w_{mn} |V_{mn}^{actual} - g_m g_n^* V_{mn}^{model}| \quad TMS (11.8)$$

Self-calibration with LOFAR

$$\sum_{time} \sum_{m < n} w_{mn} |V_{mn}^{actual} - g_m g_n^* V_{mn}^{model}| \quad TMS (11.8)$$

Self-calibration with LOFAR

$$\sum_{time} \sum_{m < n} w_{mn} |V_{mn}^{actual} - g_m g_n^* V_{mn}^{model}| \quad TMS (11.8)$$

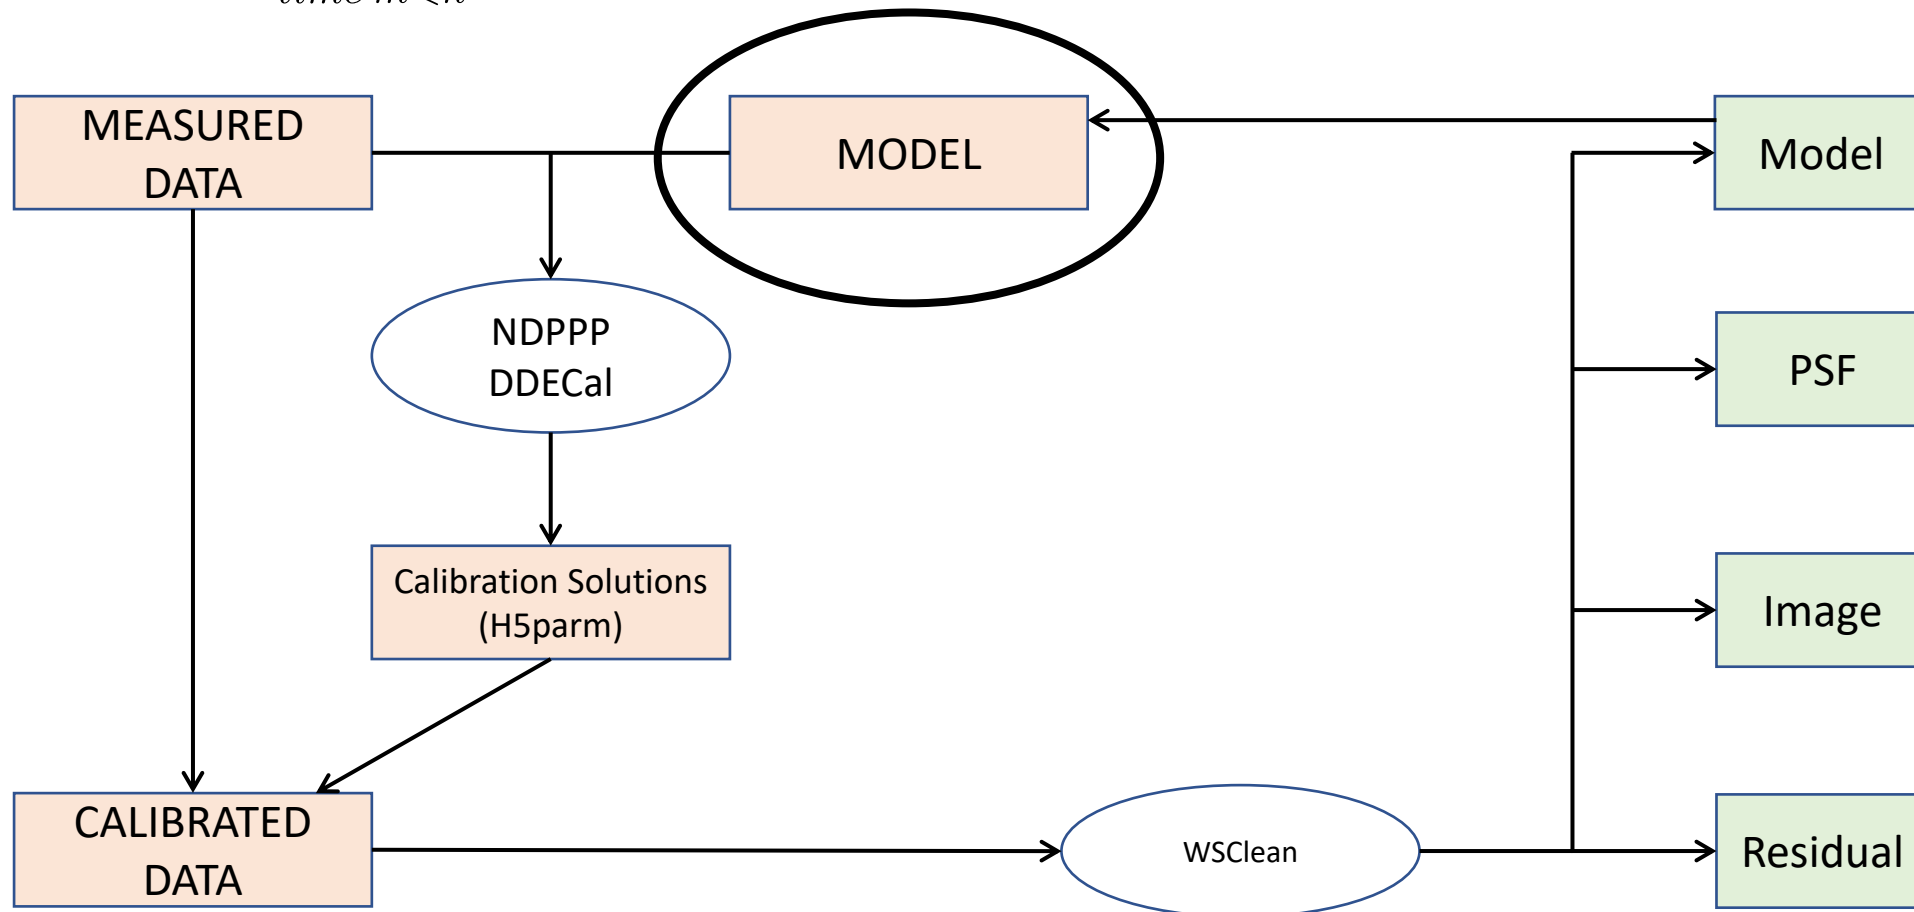

Calibration Constraints

- More DOF to less DOF
 - Diagonal (amplitude+phase)
 - Phase-only
 - TEC: Ionosphere-constraint phase-only (additional frequency constraint)
- Begin with TEC, then few times Phase-only, then Diagonal

Self-calibration with LOFAR

$$\sum_{time} \sum_{m < n} w_{mn} |V_{mn}^{actual} - g_m g_n^* V_{mn}^{model}| \quad TMS (11.8)$$

Model dependency

- Initial model
- 3C 273 as an example

Model dependency – 3C 273

1 GHz

Model dependency – 3C 273

300 MHz

Model dependency – 3C 273

Model dependency

- Initial model
- 3C 273 as an example
- Brightest spot in model must correspond with data!

Conclusion/Outlook

- LOFAR LBA VLBI works!
- Works best on bright ($>100\text{Jy}$) compact (unresolved) sources
- Doesn't depend too much on initial model
- Many more sources
